Eleuterio F. Toro

Riemann Solvers and Numerical Methods for Fluid Dynamics

A Practical Introduction

2 nd Edition
with 247 Figures and 26 Tables

Springer

Table of Contents

Preface to the First Edition V

1. The Equations of Fluid Dynamics 1
1.1 The Euler Equations 2
1.1.1 Conservation–Law Form 3
1.1.2 Other Compact Forms 4
1.2 Thermodynamic Considerations 5
1.2.1 Units of Measure 5
1.2.2 Equations of State (EOS) 6
1.2.3 Other Variables and Relations 7
1.2.4 Ideal Gases 11
1.2.5 Covolume and van der Waal Gases 13
1.3 Viscous Stresses 15
1.4 Heat Conduction 17
1.5 Integral Form of the Equations 18
1.5.1 Time Derivatives 19
1.5.2 Conservation of Mass 20
1.5.3 Conservation of Momentum 21
1.5.4 Conservation of Energy 23
1.6 Submodels 25
1.6.1 Summary of the Equations 25
1.6.2 Flow with Area Variation 27
1.6.3 Axi–Symmetric Flows 28
1.6.4 Cylindrical and Spherical Symmetry 29
1.6.5 Plain One–Dimensional Flow 29
1.6.6 Steady Compressible Flow 32
1.6.7 Viscous Compressible Flow 33
1.6.8 Free–Surface Gravity Flow 33
1.6.9 The Shallow Water Equations 35
1.6.10 Incompressible Viscous Flow 38
1.6.11 The Artificial Compressibility Equations 39

2. Notions on Hyperbolic Partial Differential Equations 41
2.1 Quasi–Linear Equations: Basic Concepts 41
2.2 The Linear Advection Equation 47
2.2.1 Characteristics and the General Solution 47
2.2.2 The Riemann Problem 49
2.3 Linear Hyperbolic Systems 50
2.3.1 Diagonalisation and Characteristic Variables 51
2.3.2 The General Initial–Value Problem 52
2.3.3 The Riemann Problem 55
2.3.4 The Riemann Problem for Linearised Gas Dynamics .. 58
2.3.5 Some Useful Definitions 59
2.4 Conservation Laws 60
2.4.1 Integral Forms of Conservation Laws 61
2.4.2 Non–Linearities and Shock Formation 65
2.4.3 Characteristic Fields 76
2.4.4 Elementary–Wave Solutions of the Riemann Problem . 83

3. Some Properties of the Euler Equations 87
3.1 The One–Dimensional Euler Equations 87
3.1.1 Conservative Formulation 87
3.1.2 Non–Conservative Formulations 91
3.1.3 Elementary Wave Solutions of the Riemann Problem.. 94
3.2 Multi–Dimensional Euler Equations 102
3.2.1 Two–Dimensional Equations in Conservative Form ... 103
3.2.2 Three–Dimensional Equations in Conservative Form .. 107
3.2.3 Three–Dimensional Primitive Variable Formulation ... 108
3.2.4 The Split Three–Dimensional Riemann Problem 110
3.3 Conservative Versus Non–Conservative Formulations 111

4. The Riemann Problem for the Euler Equations 115
4.1 Solution Strategy 116
4.2 Equations for Pressure and Particle Velocity 119
4.2.1 Function f_L for a Left Shock 120
4.2.2 Function f_L for Left Rarefaction 122
4.2.3 Function f_R for a Right Shock 123
4.2.4 Function f_R for a Right Rarefaction 124
4.3 Numerical Solution for Pressure 125
4.3.1 Behaviour of the Pressure Function 125
4.3.2 Iterative Scheme for Finding the Pressure 127
4.3.3 Numerical Tests 129
4.4 The Complete Solution 133
4.5 Sampling the Solution 136
4.5.1 Left Side of Contact: $S = x/t \leq u_*$ 137
4.5.2 Right Side of Contact: $S = x/t \geq u_*$ 137
4.6 The Riemann Problem in the Presence of Vacuum 138

4.6.1 Case 1: Vacuum Right State 140
4.6.2 Case 2: Vacuum Left State 141
4.6.3 Case 3: Generation of Vacuum 142
4.7 The Riemann Problem for Covolume Gases 143
4.7.1 Solution for Pressure and Particle Velocity 144
4.7.2 Numerical Solution for Pressure 147
4.7.3 The Complete Solution 147
4.7.4 Solution Inside Rarefactions 148
4.8 The Split Multi–Dimensional Case 149
4.9 FORTRAN Program for Exact Riemann Solver 151

5. Notions on Numerical Methods 163
5.1 Discretisation: Introductory Concepts 163
5.1.1 Approximation to Derivatives 164
5.1.2 Finite Difference Approximation to a PDE 165
5.2 Selected Difference Schemes 167
5.2.1 The First Order Upwind Scheme 168
5.2.2 Other Well–Known Schemes 172
5.3 Conservative Methods 174
5.3.1 Basic Definitions 175
5.3.2 Godunov's First–Order Upwind Method 177
5.3.3 Godunov's Method for Burgers's Equation 180
5.3.4 Conservative Form of Difference Schemes 184
5.4 Upwind Schemes for Linear Systems 187
5.4.1 The CIR Scheme 188
5.4.2 Godunov's Method 190
5.5 Sample Numerical Results 193
5.5.1 Linear Advection 193
5.5.2 The Inviscid Burgers Equation 195
5.6 FORTRAN Program for Godunov's Method 196

6. The Method of Godunov for Non–linear Systems 213
6.1 Bases of Godunov's Method 213
6.2 The Godunov Scheme 216
6.3 Godunov's Method for the Euler Equations 218
6.3.1 Evaluation of the Intercell Fluxes 219
6.3.2 Time Step Size 221
6.3.3 Boundary Conditions 222
6.4 Numerical Results and Discussion 225
6.4.1 Numerical Results for Godunov's Method 226
6.4.2 Numerical Results from Other Methods 228

7. Random Choice and Related Methods 237
7.1 Introduction 237
7.2 RCM on a Non–Staggered Grid 238
7.2.1 The Scheme for Non–Linear Systems 239
7.2.2 Boundary Conditions and the Time Step Size 243
7.3 A Random Choice Scheme of the Lax–Friedrichs Type 244
7.3.1 Review of the Lax–Friedrichs Scheme 244
7.3.2 The Scheme 245
7.4 The RCM on a Staggered Grid 246
7.4.1 The Scheme for Non–Linear Systems 247
7.4.2 A Deterministic First–Order Centred Scheme (FORCE) 248
7.4.3 Analysis of the FORCE Scheme 249
7.5 Random Numbers 250
7.5.1 Van der Corput Pseudo–Random Numbers 250
7.5.2 Statistical Properties 252
7.5.3 Propagation of a Single Shock 253
7.6 Numerical Results 255
7.7 Concluding Remarks 257

8. Flux Vector Splitting Methods 265
8.1 Introduction 265
8.2 The Flux Vector Splitting Approach 266
8.2.1 Upwind Differencing 266
8.2.2 The FVS Approach 268
8.3 FVS for the Isothermal Equations 270
8.3.1 Split Fluxes 271
8.3.2 FVS Numerical Schemes 272
8.4 FVS Applied to the Euler Equations 273
8.4.1 Recalling the Equations 273
8.4.2 The Steger–Warming Splitting 275
8.4.3 The van Leer Splitting 276
8.4.4 The Liou–Steffen Scheme 278
8.5 Numerical Results 280
8.5.1 Tests 280
8.5.2 Results for Test 1 280
8.5.3 Results for Test 2 281
8.5.4 Results for Test 3 281
8.5.5 Results for Test 4 282
8.5.6 Results for Test 5 282

9. Approximate–State Riemann Solvers 293
9.1 Introduction 293
9.2 The Riemann Problem and the Godunov Flux 294
9.2.1 Tangential Velocity Components 296
9.2.2 Sonic Rarefactions 296

9.3 Primitive Variable Riemann Solvers (PVRS) 297
9.4 Approximations Based on the Exact Solver 301
9.4.1 A Two–Rarefaction Riemann Solver (TRRS) 301
9.4.2 A Two–Shock Riemann Solver (TSRS) 303
9.5 Adaptive Riemann Solvers 304
9.5.1 An Adaptive Iterative Riemann Solver (AIRS) 304
9.5.2 An Adaptive Noniterative Riemann Solver (ANRS) ... 305
9.6 Numerical Results 306

10. The HLL and HLLC Riemann Solvers 315
10.1 The Riemann Problem and the Godunov Flux 316
10.2 The Riemann Problem and Integral Relations 317
10.3 The HLL Approximate Riemann Solver 319
10.4 The HLLC Approximate Riemann Solver 321
10.5 Wave–Speed Estimates 323
10.5.1 Direct Wave Speed Estimates 324
10.5.2 Pressure–Velocity Based Wave Speed Estimates 325
10.6 Algorithms for Intercell Fluxes 327
10.6.1 The HLL and HLLC Fluxes 327
10.6.2 The Rusanov Flux 327
10.7 Contact Waves and Passive Scalars 328
10.8 Numerical Results 329
10.9 Closing Remarks and Extensions 331

11. The Riemann Solver of Roe 341
11.1 Bases of the Roe Approach 342
11.1.1 The Exact Riemann Problem and the Godunov Flux .. 342
11.1.2 Approximate Conservation Laws 343
11.1.3 The Approximate Riemann Problem and the Intercell Flux 345
11.2 The Original Roe Method 347
11.2.1 The Isothermal Equations 348
11.2.2 The Euler Equations 350
11.3 The Roe–Pike Method 354
11.3.1 The Approach 354
11.3.2 The Isothermal Equations 355
11.3.3 The Euler Equations 359
11.4 An Entropy Fix 362
11.4.1 The Entropy Problem 362
11.4.2 The Harten–Hyman Entropy Fix 363
11.4.3 The Speeds u_*, a_{*L}, a_{*R} 366
11.5 Numerical Results and Discussion 367
11.5.1 The Tests 367
11.5.2 The Results 368
11.6 Extensions 369

12. The Riemann Solver of Osher 373
12.1 Osher's Scheme for a General System 374
12.1.1 Mathematical Bases 374
12.1.2 Osher's Numerical Flux 376
12.1.3 Osher's Flux for the Single–Wave Case 377
12.1.4 Osher's Flux for the Inviscid Burgers Equation 379
12.1.5 Osher's Flux for the General Case 380
12.2 Osher's Flux for the Isothermal Equations 381
12.2.1 Osher's Flux with P–Ordering 382
12.2.2 Osher's Flux with O–Ordering 385
12.3 Osher's Scheme for the Euler Equations 388
12.3.1 Osher's Flux with P–Ordering 389
12.3.2 Osher's Flux with O–Ordering 391
12.3.3 Remarks on Path Orderings 396
12.3.4 The Split Three–Dimensional Case 399
12.4 Numerical Results and Discussion 400
12.5 Extensions 401

13. High–Order and TVD Methods for Scalar Equations 409
13.1 Introduction 409
13.2 Basic Properties of Selected Schemes 411
13.2.1 Selected Schemes 411
13.2.2 Accuracy 413
13.2.3 Stability 414
13.3 WAF–Type High Order Schemes 416
13.3.1 The Basic WAF Scheme 416
13.3.2 Generalisations of the WAF Scheme 419
13.4 MUSCL–Type High–Order Methods 422
13.4.1 Data Reconstruction 422
13.4.2 The MUSCL–Hancock Method (MHM) 425
13.4.3 The Piece–Wise Linear Method (PLM) 428
13.4.4 The Generalised Riemann Problem (GRP) Method ... 430
13.4.5 Slope–Limiter Centred (SLIC) Schemes 432
13.4.6 Other Approaches 435
13.4.7 Semi–Discrete Schemes 435
13.4.8 Implicit Methods 436
13.5 Monotone Schemes and Accuracy 437
13.5.1 Monotone Schemes 437
13.5.2 A Motivating Example 440
13.5.3 Monotone Schemes and Godunov's Theorem 442
13.5.4 Spurious Oscillations and High Resolution 445
13.5.5 Data Compatibility 446
13.6 Total Variation Diminishing (TVD) Methods 448
13.6.1 The Total Variation 448
13.6.2 TVD and Monotonicity Preserving Schemes 449

13.7 Flux Limiter Methods 453
13.7.1 TVD Version of the WAF Method 453
13.7.2 The General Flux–Limiter Approach 460
13.7.3 TVD Upwind Flux Limiter Schemes 465
13.7.4 TVD Centred Flux Limiter Schemes 470
13.8 Slope Limiter Methods 476
13.8.1 TVD Conditions 476
13.8.2 Construction of TVD Slopes 477
13.8.3 Slope Limiters 479
13.8.4 Limited Slopes Obtained from Flux Limiters 481
13.9 Extensions of TVD Methods 482
13.9.1 TVD Schemes in the Presence of Source Terms 482
13.9.2 TVD Schemes in the Presence of Diffusion Terms 483
13.10 Numerical Results for Linear Advection 484

14. High–Order and TVD Schemes for Non–Linear Systems .. 489
14.1 Introduction 489
14.2 CFL and Boundary Conditions 490
14.3 Weighted Average Flux (WAF) Schemes 492
14.3.1 The Original Version of WAF 492
14.3.2 A Weighted Average State Version 494
14.3.3 Rarefactions in State Riemann Solvers 495
14.3.4 TVD Version of WAF Schemes 497
14.3.5 Riemann Solvers 499
14.3.6 Summary of the WAF Method 499
14.4 The MUSCL–Hancock Scheme 500
14.4.1 The Basic Scheme 500
14.4.2 A Variant of the Scheme 502
14.4.3 TVD Version of the Scheme 503
14.4.4 Summary of the MUSCL–Hancock Method 506
14.5 Centred TVD Schemes 507
14.5.1 Review of the FORCE Flux 507
14.5.2 A Flux Limiter Centred (FLIC) Scheme 508
14.5.3 A Slope Limiter Centred (SLIC) Scheme 510
14.6 Primitive–Variable Schemes 511
14.6.1 Formulation of the Equations and Primitive Schemes . 511
14.6.2 A WAF–Type Primitive Variable Scheme 513
14.6.3 A MUSCL–Hancock Primitive Scheme 516
14.6.4 Adaptive Primitive–Conservative Schemes 518
14.7 Some Numerical Results 519
14.7.1 Upwind TVD Methods 519
14.7.2 Centred TVD Methods 520

15. Splitting Schemes for PDEs with Source Terms 527
15.1 Introduction 527
15.2 Splitting for a Model Equation 528
15.3 Numerical Methods Based on Splitting 531
15.3.1 Model Equations 531
15.3.2 Schemes for Systems 532
15.4 Remarks on ODE Solvers 533
15.4.1 First–Order Systems of ODEs 533
15.4.2 Numerical Methods 535
15.4.3 Implementation Details for Split Schemes 536
15.5 Concluding Remarks 537

16. Methods for Multi–Dimensional PDEs 539
16.1 Introduction 539
16.2 Dimensional Splitting 540
16.2.1 Splitting for a Model Problem 540
16.2.2 Splitting Schemes for Two–Dimensional Systems 541
16.2.3 Splitting Schemes for Three–Dimensional Systems 543
16.3 Practical Implementation of Splitting Schemes in Three Dimensions 545
16.3.1 Handling the Sweeps by a Single Subroutine 545
16.3.2 Choice of Time Step Size 547
16.3.3 The Intercell Flux and the TVD Condition 547
16.4 Unsplit Finite Volume Methods 551
16.4.1 Introductory Concepts 551
16.4.2 Accuracy and Stability of Multidimensional Schemes 554
16.5 A MUSCL–Hancock Finite Volume Scheme 557
16.6 WAF–Type Finite Volume Schemes 559
16.6.1 Two–Dimensional Linear Advection 559
16.6.2 Three–Dimensional Linear Advection 563
16.6.3 Schemes for Two–Dimensional Nonlinear Systems 566
16.6.4 Schemes for Three–Dimensional Nonlinear Systems 569
16.7 Non–Cartesian Geometries 570
16.7.1 Introduction 570
16.7.2 General Domains and Coordinate Transformation 571
16.7.3 The Finite Volume Method for Non–Cartesian Domains 573

17. Multidimensional Test Problems 581
17.1 Explosions and Implosions 581
17.1.1 Explosion Test in Two–Space Dimensions 582
17.1.2 Implosion Test in Two Dimensions 585
17.1.3 Explosion Test in Three Space Dimensions 586
17.2 Shock Wave Reflection from Wedges 587
17.2.1 Mach Number $M_S = 1.7$ and $\phi = 25$ Degrees 588
17.2.2 Mach Number $M_S = 1.2$ and $\phi = 30$ Degrees 591

18. Concluding Remarks 593
18.1 Summary 593
18.2 Extensions and Applications 594
18.2.1 Shallow Water Equations 594
18.2.2 Steady Supersonic Euler Equations 594
18.2.3 The Incompressible Navier–Stokes Equations 595
18.2.4 The Compressible Navier–Stokes Equations 595
18.2.5 Compressible Materials 595
18.2.6 Detonation Waves 596
18.2.7 Multiphase Flows 596
18.2.8 Magnetohydrodynamics (MHD) 596
18.2.9 Relativistic Gas Dynamics 597
18.2.10Waves in Solids 597
18.3 NUMERICA 597
